DOWNTIME

Minutes are evidence. Opinions are not.

Open it, tap START THE CLOCK, and walk away — the clock keeps counting with the app closed. Tap again when it runs, and write the fix down while it is still fresh.

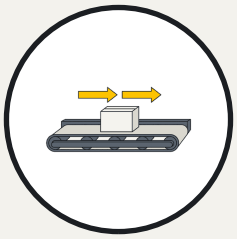

TAP TO STOP

The second it stops, start the clock

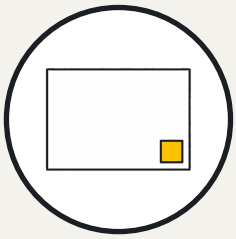

WALK AWAY

It counts with the app closed

TAP TO RUN

Stop the clock when it moves

THE FIX

Written so the next shift can repeat it

START THE CLOCK

Open it, tap START THE CLOCK. No typing required - go deal with the problem, not the phone.

LET IT COUNT

The record is wall-clock time. Force-close the app; the minutes survive.

CLOSE IT HONESTLY

What happened, and what actually got it running again.

USE THE MINUTES

The week page and the OEE calculator read this log. Nothing is retyped.

"Waiting - 3h 20m, all on Wrapper 2" is the sentence that buys a spare part.
